ACADEMIC PROJECTS

1. IOT based smart car parking system

-It provides comprehensive mobile application based parking solution for the car users (for housing society or office employees). Here IR sensors are used to identify if parking space is available. And that availability of free slot is transmitted using Wi-Fi module, microcontroller and wireless communication technology to the server. And is retrieve through mobile application.
RFID tag attached to car is used to authentic user.

2. Vehicle Speed Limiter with Alcohol Detection

-In this alcohol is detected using MQ3 alcohol sensor. It gives analog output data that can be analyzed using microcontroller PIC18f4520 that we have used. It doesn't need ADC here. When it MQ3 detects alcoholic content then it turns on buzzer and at the same time it displays the rate in percentage form on LCD display. And in same way DC motor will be turned off when alcohol is detected. And thus achieved speed control.
